

Thank you. I'm Rahma, the Technical Manager.

So now, think of a traffic light that knows the road is empty and turns green for you. That's the kind of city we're building.

🎬 اسألي وبصي للجنة، واستني 3 ثواني. لو حد جاوب، قولي "Great idea!"، ولو محدش جاوب كمّلي عادي.

So, what do you think we need to build a city like this?

Great ideas! To build this city, we will install sensors that measure traffic, energy and water, smart cameras that help keep our streets safe, and smart traffic lights. We will also use solar panels that give us clean energy and lower bills, and then connect everything through one control center, the brain of the city, and a city app, where citizens can pay bills and renew documents from their phone.

➡️ **So, how does it all work together?**

Well, it works in four steps: first, sensors collect the data; then, the network sends it to the control center; after that, the control center analyzes the information and makes decisions; and finally, citizens see the result in the app.

For example, if there is an accident, the cameras see it, and the control center sends help faster.

So: when the road is empty, the system detects it, sends the information, and changes the traffic light to green.

The result? Less waiting, less traffic, and more time for everyone!

➡️ **But to build all this, we need the right resources.**

Technical Manager · Our five resources

Slide 13

So now, let's look at our resources. We need five types.

First, people: around 186 in the infrastructure phase. They include engineers, technicians, software and cybersecurity experts, and contractor crews who build in the streets.

Most of these people work in Phase 4, when we build the network and install the devices.

Second, materials, like cables.

Third, equipment, like cameras, smart meters, servers, and field vehicles.

And finally, money and time.

Some of this we already have, like cameras and fiber. The rest, we buy through our partners.

➡️ **But before the budget, let's play a quick game!**

Technical Manager · Game: which technology fixes it?

Slide 14

Here's the game: I'll show you a problem, and you tell me which technology fixes it.

Number one: stuck in traffic for an hour.

Number two: a huge electricity bill.

Number three: a long line to renew your ID.

And number four: help arrives too late after an accident.

Here are the answers: smart traffic lights, solar panels, the city app, and smart cameras with the control center.

Well done, everyone!

➡️ **Now, let's talk about the budget. Our Finance Manager, Moaz, will tell you.**
