ROAYA · FINAL SCRIPT

Final script · 23 slides

Six speakers · about 19–23 minutes

Starts at	Speaker	Slides	Time
0:00	Project Manager	1 · 2 · 3 · 4 · 5 · 6	≈ 3:55
3:55	Planning Manager	7 · 8 · 9	≈ 2:57
6:52	Technical Manager	10 · 11 · 12	≈ 2:59
9:51	Finance Manager	13 · 14 · 15	≈ 3:07
12:58	Risk & Quality Manager	16 · 17 · 18	≈ 3:06
16:04	Stakeholder Manager	19 · 20 · 21 · 22 · 23	≈ 3:21
	Total		≈ 19:25

إزاي تقروا الورق ده

- الكلام العادي = اللي بتقولوه بالإنجليزي. قولوا الفكرة، مش لازم نفس الكلمات بالظبط.
- 🎬 المربع الأصفر = تعليمات بالعربي، دي بتعملوها ومش بتتقال.
- ➡️ = جملة الربط، قولوها وإنتو بتقلبوا السلايد.
- [Name] = قول اسمك، أو اسم اللي بعدك.

قبل العرض

- جهزوا: البروشور المطبوع (سلايد 21).
- واحد يمسك الوقت ويشاور لو حد طوّل.
- اتكلموا براحة، والوقف بين السلايدات طبيعي.

Project Manager · مدير المشروع — **slides 1 · 2 · 3 · 4 · 5 · 6 · ≈ 3:55 min**

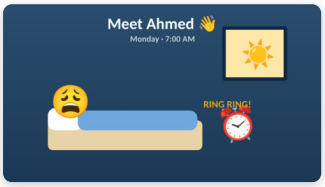

SLIDE 1 · COVER

Good morning, everyone. I'm [Name], the Project Manager of team Roaya.

🎬 ابتسم وبص للجنة، واتكلم براحة.

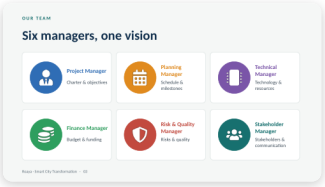

Every day, many of us lose time in traffic. Today, let me introduce you to someone who loses a lot more. His name is Ahmed.

SLIDE 2 · AHMED'S MONDAY (VIDEO)

🎬 الفيديو بيشتغل لوحده (دقيقة). اقف على جنب وبص على الشاشة معاهم.

Poor Ahmed! Traffic, a high bill, and a long line. That's why we started Roaya. Roaya means "vision" in Arabic.

SLIDE 3 · OUR TEAM

We are six managers, and each of us will tell you about one part of the plan.

🎬 وإنت بتقول كل دور، صاحبه يرفع إيده ويبتسم.

Planning, Technical, Finance, Risk and Quality, and Stakeholders. And I'm the Project Manager.

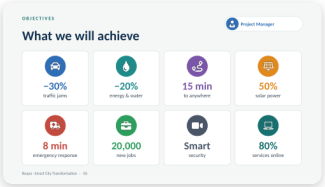

SLIDE 4 · WHY ROAYA?

Why Roaya? To make city life easier, safer and greener.

Easier, because people spend less time in traffic. Safer, because help arrives faster. And greener, because the city uses clean solar energy.

The project takes 24 months and 550 million pounds, in 7 phases.

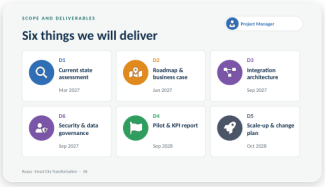

SLIDE 5 · WHAT WE WILL ACHIEVE

We have eight clear goals. For example: 30% less traffic, half of our power from the sun, and emergency help in under 8 minutes.

🎬 شاور على هدف الـ 15 دقيقة على السلايد.

My favourite goal is this one: 15 minutes to anywhere in the city!

We will measure each goal in the pilot and at the end of the project.

SLIDE 6 · SIX THINGS WE WILL DELIVER

Our work ends with six deliverables, from the first study in 2027 to the final plan in 2028. The sponsor approves each one before we move on.

➡️ **So, when will all this happen? Our Planning Manager, [Name], will tell you.**

Planning Manager · مدير التخطيط — **slides 7 · 8 · 9 · ≈ 2:57 min**

SLIDE 7 · 24 MONTHS, 7 PHASES

Thank you. I'm [Name], the Planning Manager.

Building a city is like building a house: walls first, then the roof. So we work in 7 phases, over 24 months.

First, we study the city as it is today: the roads, energy, water and services. Then we decide what to build first and how much it costs, and we design how all the systems will connect.

In 2027, we study, plan and design. In 2028, we build, test, try it in one district, and then open it to the whole city.

Each phase has one owner, so we always know who is responsible.

SLIDE 8 · EIGHT CHECKPOINTS

We have eight checkpoints. At each one, the sponsor must say yes before we continue.

In 2027, we finish the assessment, the roadmap and the design. In 2028, the infrastructure is ready, the systems are tested, and the pilot report is ready.

> 🎬 شاور على العلم الدهبي في الآخر.

And this gold flag is the finish line: December 2028.

Why checkpoints? Because they turn a two-year project into small goals that we can check. If something is late, we know early, and we can fix it.

SLIDE 9 · INSIDE THE BIGGEST PHASE

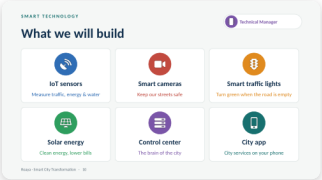

The biggest phase is Phase 4: six months to build the network, the sensors, the cameras and the solar panels.

Up to 186 people work in this phase at the same time. It takes 43% of the budget, so we check it every week.

Every week, I update the Gantt chart and share a status report with the team. If anything is late, we write down the reason and fix it early, not at the end.

➡️ But what exactly will we build? Our Technical Manager, [Name], will show you.

Technical Manager · المدير التقني — **slides 10 · 11 · 12 · ≈ 2:59 min**

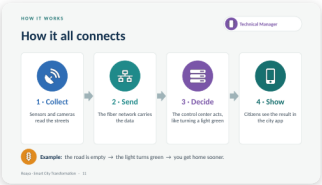

SLIDE 10 · WHAT WE WILL BUILD

Thank you. I'm Rahma, the Technical Manager.

So now, think of a traffic light that knows the road is empty and turns green for you. That's the kind of city we're building.

To build this city, we will install sensors that measure traffic, energy and water, smart cameras that help keep our streets safe, and smart traffic lights. We will also use solar panels that give us clean energy and lower bills, and then connect everything through one control center and a city app.

➡️ **So, how does it all work together?**

SLIDE 11 · HOW IT ALL CONNECTS

Well, it works in four steps: first, sensors collect the data; then, the network sends it to the control center; after that, the control center analyzes the information and makes decisions; and finally, citizens see the result in the app.

🎬 شاوري على الـ 4 خطوات على السلايد وإنتي بتقوليهم، من الشمال لليمين.

In other words, the control center is the brain of the city.

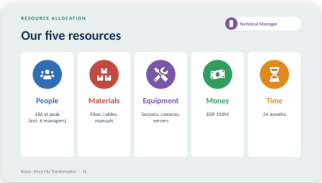

And from the app, citizens can pay bills and renew documents from their phone.

For example, if there is an accident, the cameras see it, and the control center sends help faster.

So: when the road is empty, the system detects it, sends the information, and changes the traffic light to green.

The result? Less waiting, less traffic, and more time for everyone!

➡️ **But to build all this, we need the right resources.**

SLIDE 12 · OUR FIVE RESOURCES

So now, let's look at our resources. We need five types.

First, people: around 186 in the infrastructure phase. They include engineers, technicians, software and cybersecurity experts.

Second, materials, like cables.

Third, equipment, like cameras, smart meters, and servers.

And finally, money and time.

➡️ **Now, let's talk about the budget. Our Finance Manager, Moaz, will tell you.**

Finance Manager · المدير المالي — **slides 13 · 14 · 15 · ≈ 3:07 min**

SLIDE 13 · WHERE THE MONEY GOES

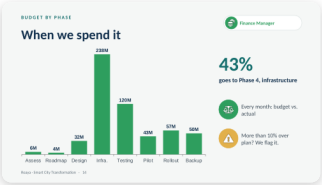

Thank you. I'm [Name], the Finance Manager.

Many of us pay high electricity bills. Solar energy will help with that.

Our budget is 550 million pounds. Almost half goes to infrastructure, and we keep 50 million as a backup.

To be exact: 250 million for infrastructure, 150 million for software and the control center, 60 million for cybersecurity, and 40 million for training.

The 50 million backup is about 10% of the budget, for anything unexpected, like higher prices.

SLIDE 14 · WHEN WE SPEND IT

Most of the money goes to Phase 4, the building phase. Every month, I compare what we spent with the plan. If we spend more than 10% over the plan, we act at once.

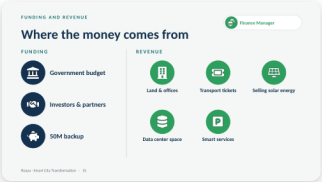

The first three phases are study and design, so together they cost only about 42 million.

Testing takes 120 million, the pilot 43 million, and the rollout to the whole city 57 million.

> 🎬 موقف قصير: احكيه بهدوء.

For example, if prices go up, we use the backup money, and we delay the less important work.

And before we buy anything, I check the suppliers, to make sure they are reliable.

SLIDE 15 · WHERE THE MONEY COMES FROM

The money comes from the government and from investors. And the city also earns money: from offices, tickets, and selling solar energy. So the city doesn't depend only on the government.

The main budget, 500 million, comes from the government, and investors and private partners add extra funding.

The city can also rent space in its data center, and charge for smart services, like smart parking.

Investors want to know how they get their money back, and this plan shows them.

Every month, I send a budget report to the sponsor and the investors.

➡️ **But every big project has risks. Our Risk and Quality Manager, [Name], will explain.**

Risk & Quality Manager · مدير المخاطر والجودة — **slides 16 · 17 · 18 · ≈ 3:06 min**

SLIDE 16 · OUR TOP RISKS

Thank you. I'm [Name], the Risk and Quality Manager.

We have four big risks: a cyberattack, device failure, going over budget, and data privacy. For each one, we have a plan.

We score each risk with a simple rule: how likely it is, times how big the damage is.

For the cyberattack, we use firewalls and 24/7 monitoring. For devices, we test them first and keep spare units. For the budget, we review costs every month. And for privacy, we follow the data protection law.

We review the high risks every week.

➡️ **So, where do our risks sit?**

SLIDE 17 · WHERE OUR RISKS SIT

This is our risk matrix. The darker the color, the bigger the danger.

🎬 شاور على R1 في الجدول. موقف قصير: عدّ الخطوات على صوابعك (1، 2، 3).

For example, if hackers attack the city: first, we stop the attacked system. Second, our security team fixes it. Third, we tell the people. No panic: we have a plan.

Each high risk has a clear trigger and a plan. For example, if more than 5% of the devices fail in one area, we replace them with spare units.

The lighter area is moderate risk, like supplier delays. We review those every month.

➡️ **Managing risks is one half. The other half is quality.**

SLIDE 18 · HOW WE PROTECT QUALITY

For quality, we have two goals: the system works 99% of the time, and 85% of people are happy.

We test everything before it goes live. If we find a problem, we write it down and fix it at once.

Quality control has five simple steps: checklists, testing, fixing issues, a final test, and then the Project Manager's approval. And all equipment must meet safety and cybersecurity standards.

We also check quality in every phase: design, installation, testing, and the pilot.

➡️ **Now, let's talk about the people. Our Stakeholder Manager, [Name].**

Stakeholder Manager · مدير أصحاب المصلحة — **slides 19 · 20 · 21 · 22 · 23 · ≈ 3:21 min**

SLIDE 19 · EVERYONE WE WORK WITH

Thank you. I'm [Name], the Stakeholder Manager.

We can build the smartest city in the world, but if people don't use it, it fails.

We work with the government, investors, tech companies, contractors, and utilities. But the most important are the citizens, people like Ahmed.

If citizens don't use the app, all our work is wasted.

➡️ **But not all of them need the same attention.**

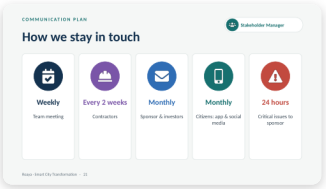

SLIDE 20 · POWER AND INTEREST

So we put them on a map. The government, investors and citizens get the most attention. Utilities, we keep happy. And contractors and tech companies, we keep informed.

Utilities need to know early, because our work touches their water and power networks.

➡️ **And to keep all these people on board, we need good communication.**

SLIDE 21 · HOW WE STAY IN TOUCH

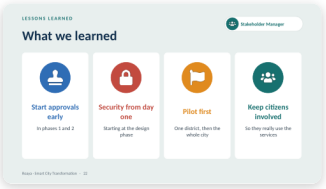

The team meets every week and contractors every two weeks; the sponsor, investors, and citizens get monthly updates, and any serious problem reaches the sponsor within 24 hours.

🎬 امسكي البروشور وارفعيه، وبعد الجملة اديه للجنة.

This is our brochure for citizens: simple words, in Arabic and English.

And before any work in the streets, we tell people at least one week before.

➡️ **Before we finish, here is what we learned.**

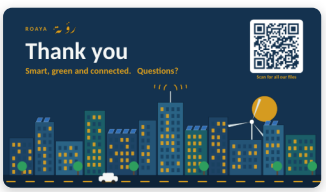

SLIDE 22 · WHAT WE LEARNED

Four lessons: start early, think about security from day one, test small first, and keep people involved.

And we write down the lessons at the end of each phase, so we can do better next time.

➡️ **So, what does all this mean for Ahmed?**

SLIDE 23 · THANK YOU

With Roaya, his Monday becomes a lot easier.

The traffic light turns green for him, he renews his ID from his phone, and his bills are lower.

You can scan the QR code to see all our files. Thank you for listening.

🎬 الفريق كله يقف جنب بعض ويبتسم، وممكن تنحنوا خفيف.
